EPAM's Sitecore Content Migration Accelerator

EPAM's Sitecore Content Migration Accelerator

Content migration can present many challenges for organizations when it comes to large-scale digital transformation or when moving content and digital assets from one system to another. Without a strategic plan in place, migration projects can lead to significant delays and inflated budgets. After helping countless clients through their unique migrations, EPAM has developed a feature-rich tool designed to take the guesswork out of the content migration process.

BENEFIT & VALUE

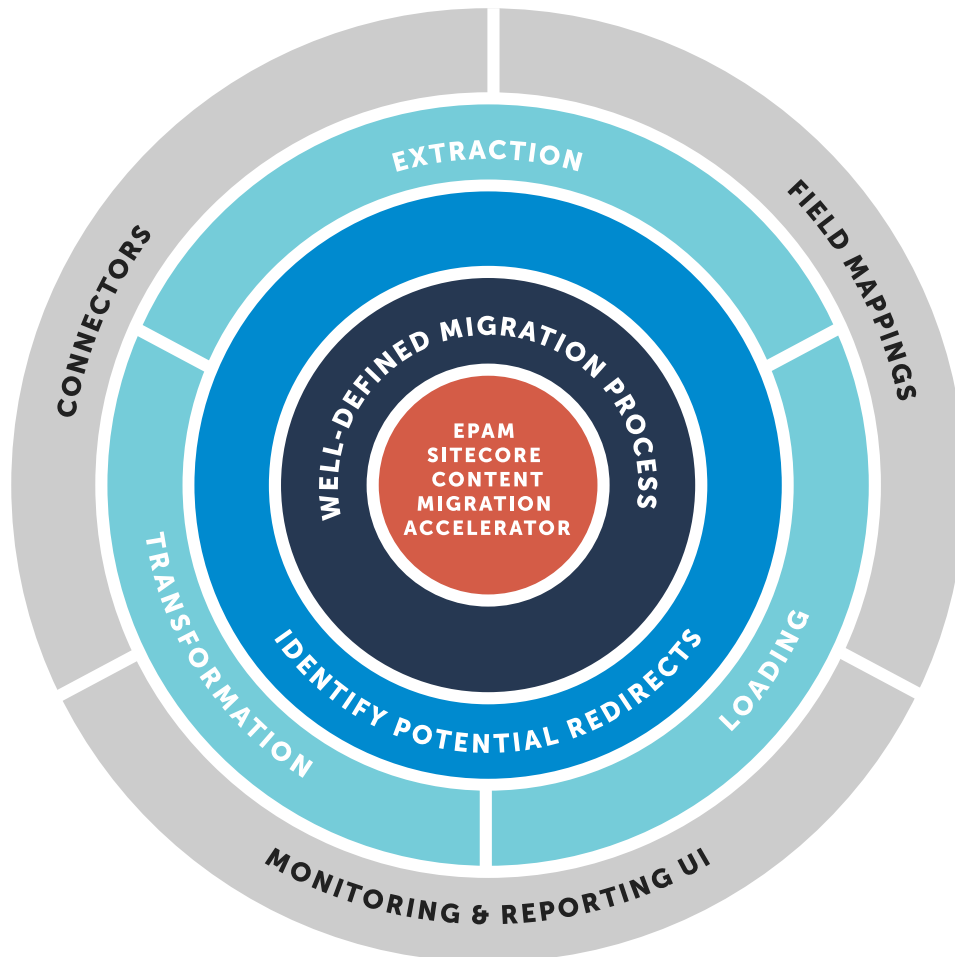

EPAM's Sitecore Content Migration Accelerator enables teams to migrate content from legacy systems, old databases and even collections of files with ease. Instead of focusing on complex scripting and maneuvering around technical limitations, our migration accelerator is both developer-ready and easy to use for non-technical authors. Through its advanced features, the accelerator can reduce content migration efforts by 80% and overall implementation time by 30%, which translates to months of saved time and cost. Additionally, our accelerator:

- Streamlines bulk loading of content from other content management system (CMS) platforms into Sitecore or rapidly imports items from another Sitecore instance
- Works with any CMS or structured storage container that houses your content
- Enables your content authors and system users to review content through non-technical interfaces
- Allows for targeted migration for iterative sectional deployment
- Migrates single-site, multi-site, multi-language, and multi-region setups
- Ensures that your SEO settings, content relationships and page hierarchy remain the same without having to edit or adjust each page during the migration process
- Provides a real-time view of the migration
- Offers a one-click cleanup of exported and imported content

EPAM's Sitecore Content Migration Accelerator

EPAM'S SITECORE CONTENT MIGRATION SOLUTION

TECHNICAL REQUIREMENTS & INFORMATION

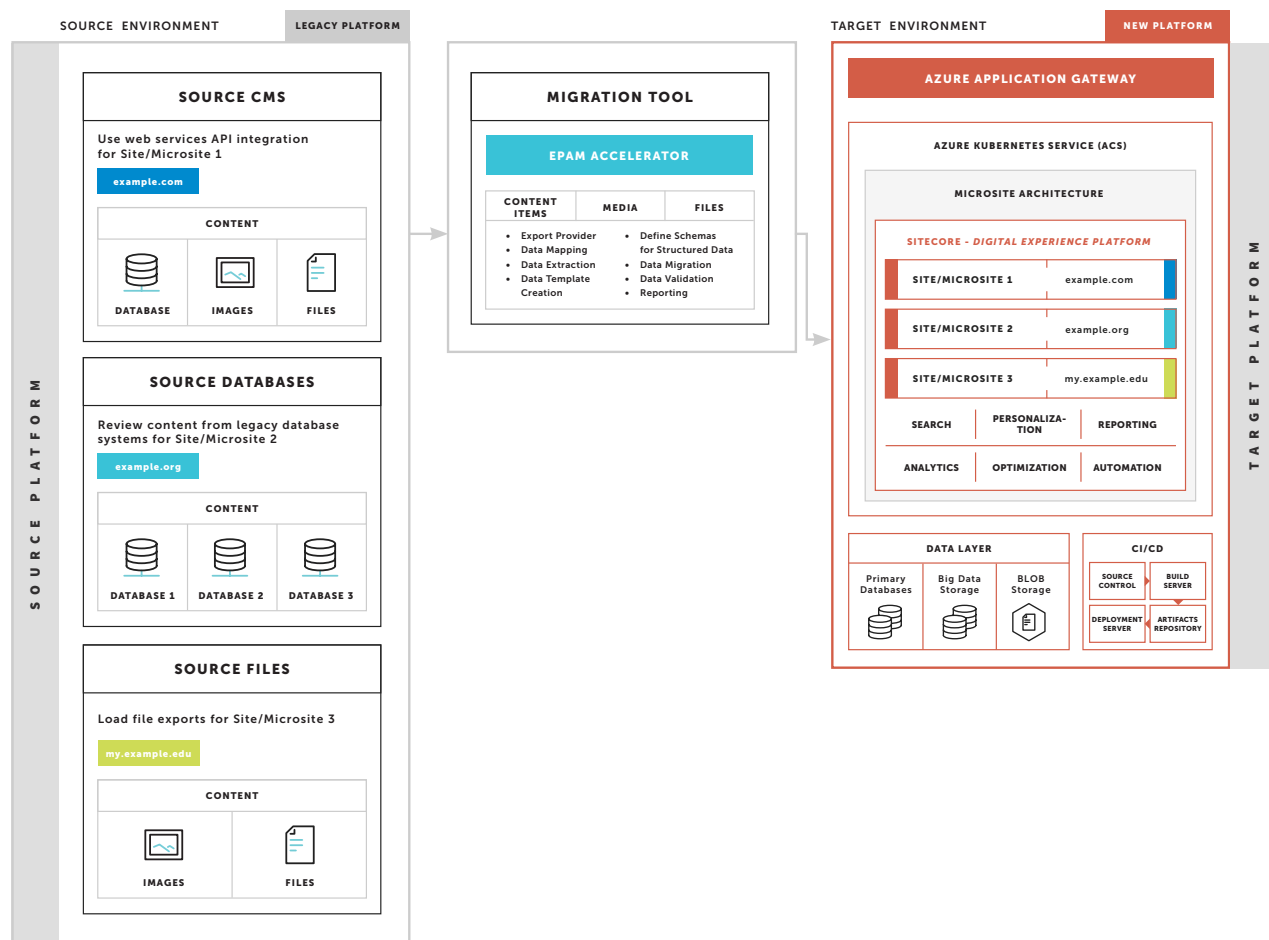

Microsoft .NET
Framework

Microsoft SQL
Server

Can run as a Sitecore
module or standalone
solution if Sitecore is
